TIME For Kids Book Of Why: Stellar Space

Synopsis

TIME for Kids The BIG Book of Why: Space answers the why, what, when, where, who and how questions about earth and space that kids commonly ask, but adults can rarely answer. Why don't we fall off the planet? Why is the sky blue? Why are diamonds so rare? Why is the sun so bright? Where does our solar system end? Written in an upbeat manner, each answer is accompanied by either a photo or an illustration to show the reasons why. Of course, TIME For Kids goes beyond answering the question, and dips into the science or history to further explain the answer in an easy-to-follow, straightforward manner. TIME For Kids The BIG Book of Why: Space is a must-have book to satisfy the most curious of kids.

Book Information

Lexile Measure: 970 (What's this?)

Series: Time for Kids Book of Why

Paperback: 48 pages

Publisher: Time For Kids; Reprint edition (May 6, 2014)

Age Range: 9 - 12 years

Grade Level: 3 and up

Customer Reviews

If you have a little time on your hands (pun intended) and really want to be up on those little odd facts about planet Earth, space, and tech-like stuff, youâ™ll love making your way through this eye-popping book. First youâ™ll learn about our planet, including some flip-flop facts like how it can be wintertime in one part and summertime in another. Oh, and then there are those time zones. Then youâ™ll shoot out through our atmosphere into the planets and stars. Speaking of the word

â€ˆshoot,â€ˆ • youâ€™ll even learn about shooting stars. Last, but not least, thereâ€™s the technology section where you can take a look at some interesting and strange, but true, facts. I always wondered why I could see my reflection in a mirror and now I know. You probably know that tornadoes are dangerous, but do you know that people get sick whenever a volcano erupts? That makes them into dangerous critters. They can emit ash and dust that can harm drinking water, and create volcanic smog called â€ˆvog.â€ˆ • Now â€ˆvogâ€™ is probably a new one on you! In the section about space youâ€™ll learn the reason stars twinkle. You probably learned that in a kindergarten song, but in this book youâ€™ll get the facts, the real ones. Lots of people are techies, but itâ€™s the old-fashioned stuff that might amaze you. Do you know why people have red eyes in photographs? Itâ€™s because ... well, I guess if you want to know that you should read about it in this fascinating book! This Book of Why is far from boring. The layout has great kid appeal, but very few grownups would be able to pass it by without taking a look. I know I did and couldn't put it down until the very last page. Now that page was a colorful one and I learned all about crayons, colored pencils, and ink.
